RoboCup: Robot Soccer!

Andy Bardagjy

URK Feb 9, 2009

What is RoboCup?

By mid-21st century, a team of fully autonomous humanoid robot soccer players shall win the soccer game, comply with the official rule of the FIFA, against the winner of the most recent World Cup.

What is RoboCup SmallSize?

Autonomous robot soccer

- **Rules:** FIFA
- **Speed:** Robots: 3.5 m/s = 8 mph!
Ball: 10+ m/s = 22mph!
- **Size:** 180mm dia, 150 mm tall
- **Field:** 6 x 4 meters
- **Time:** Two 15 min halves

System Overview

- **Mechanical**
 - Drivetrain
 - Ball Control
- **Software**
 - Vision
 - Gameplay
- **Electrical**
 - Controller
 - Ball Control

Drivetrain

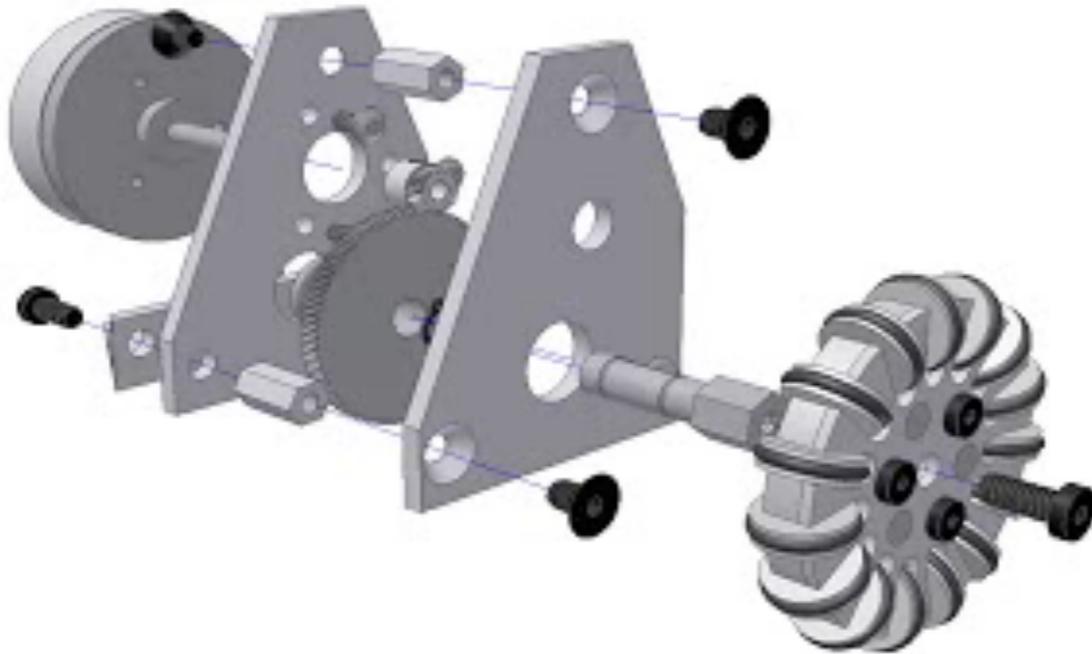

- Over 3 m/s in any direction
- Four 35 watt brushless motors
- Holonomic drive configuration

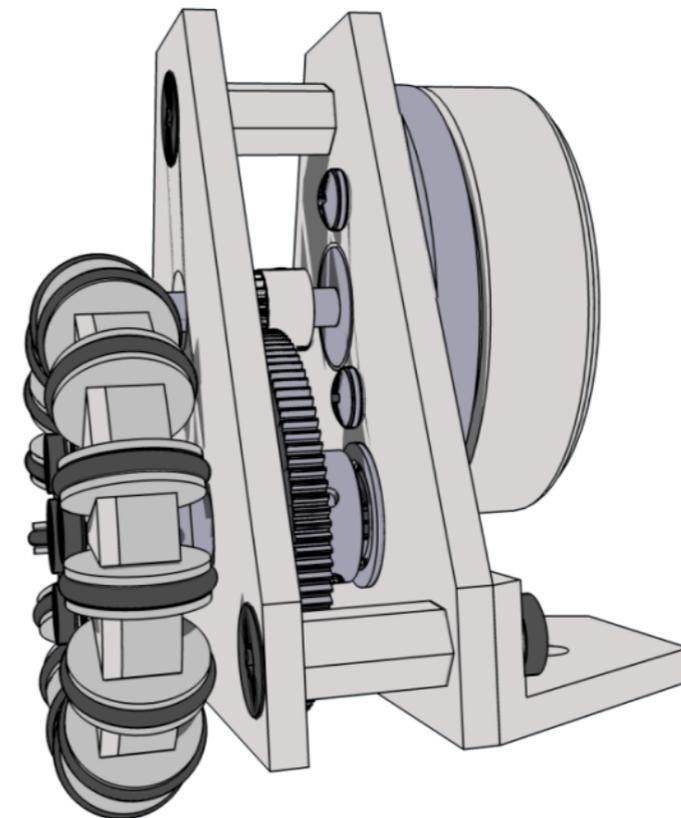

Drivetrain

- **Optimized** for cost effective manufacturing
- Fabricated as far away as **China**

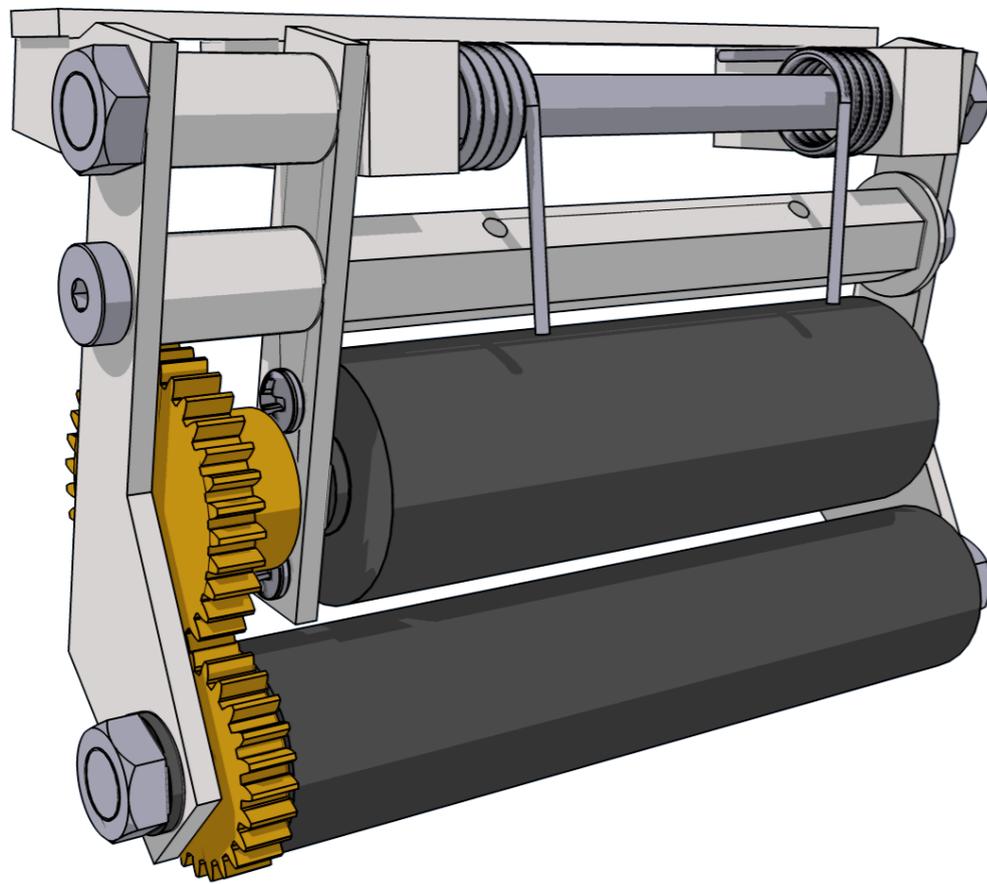

- **38 parts** per wheel
- **62 parts** per module

Ball Control

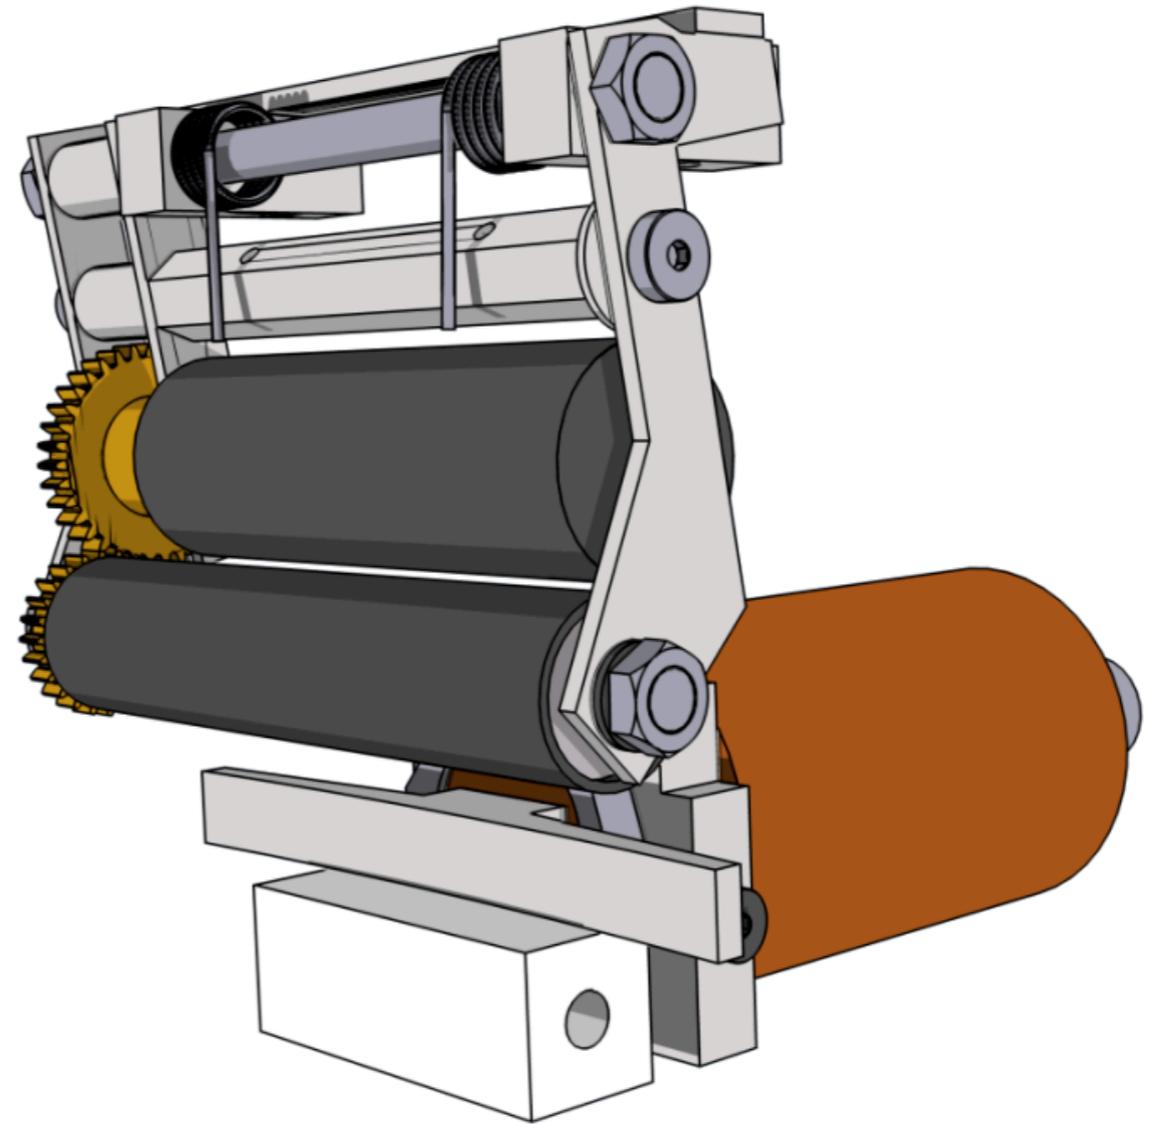

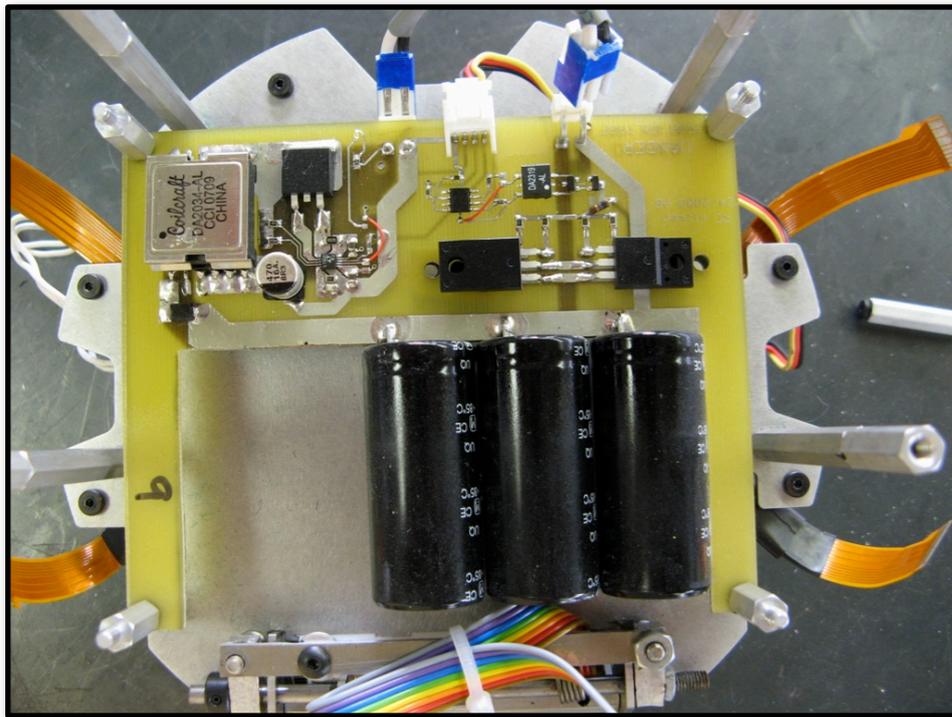

- Compact **design**
- High torque **brushless motor**
- **Silicon rubber** roller for added traction
- **Torsion springs** absorb ball energy
- Wide **ball contact surface**

Kicker

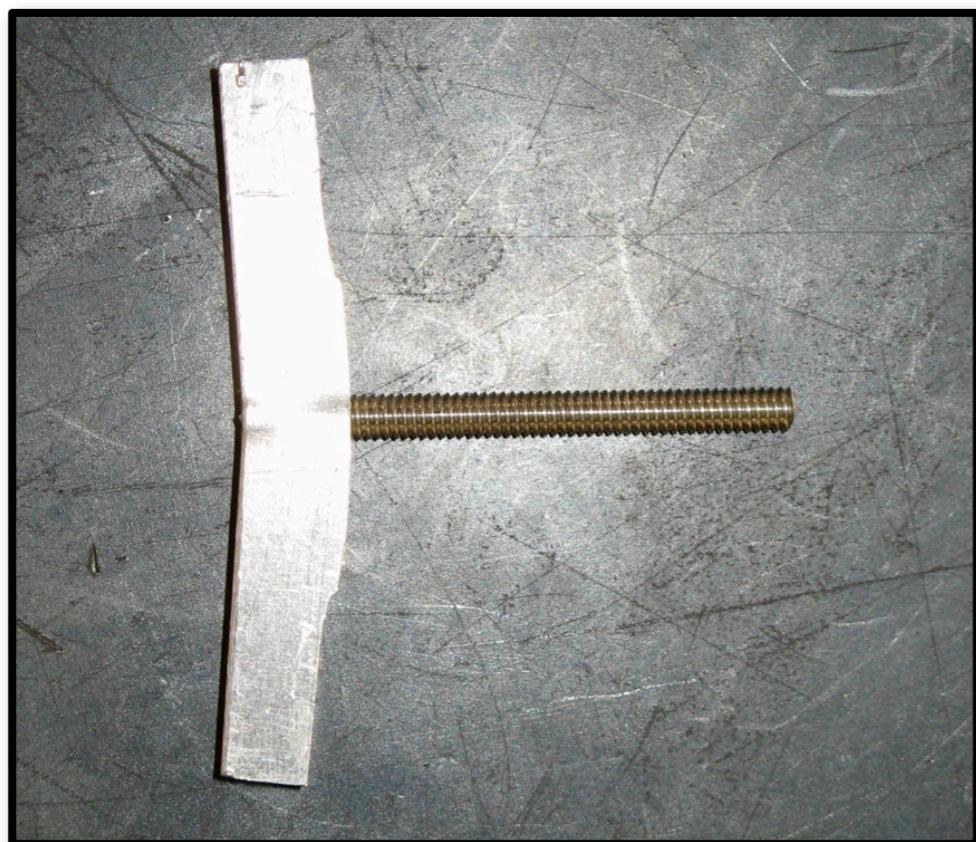

- **Variable** power delivery
- **Pulse shaping** to reduce electromagnetic losses

- Charges in $\frac{1}{4}$ second
- 85% efficient charger

Kicker

- Provides over **150 Amps** at **250 Volts**
- Stores **75 Joules**

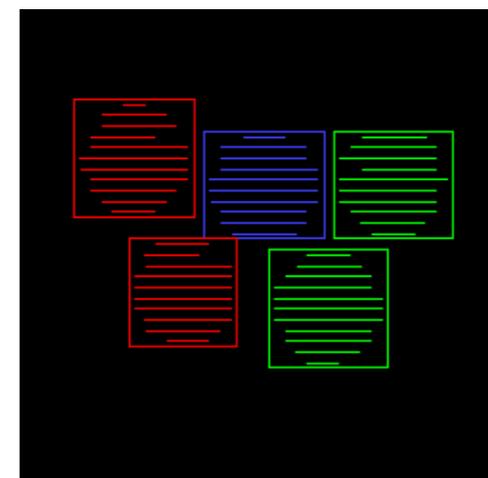

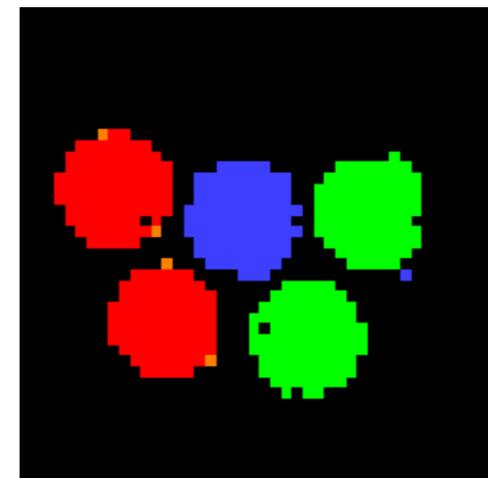

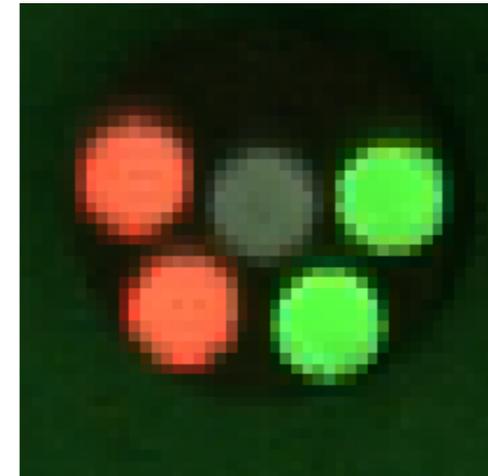

- Over **50 Kilowatts** of electrical power

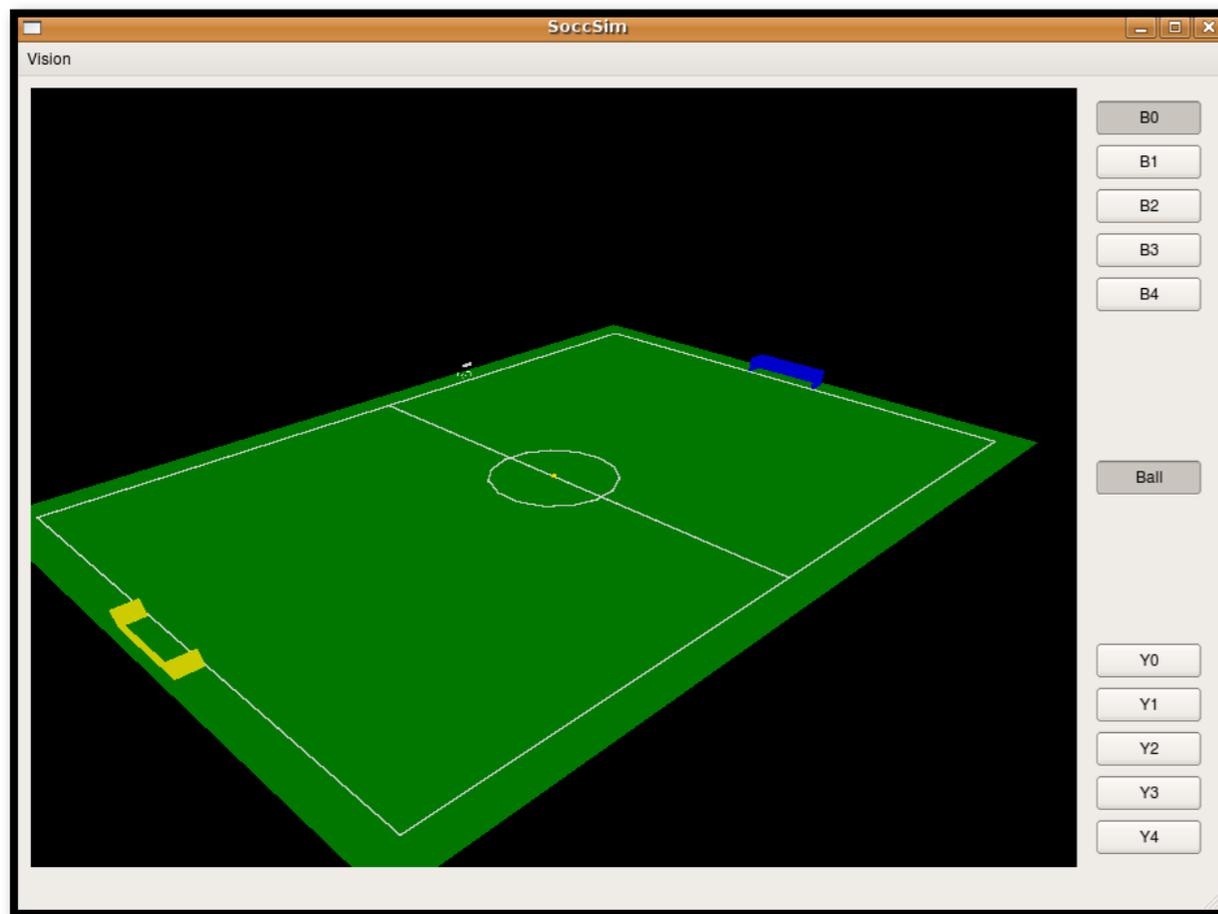

Vision

- Greater than **5 mm accuracy**
- **90FPS** Gigabit Ethernet cameras
- Easy, graphical **configuration** and **calibration**
- High speed **execution** thanks to precomputed **lookup tables**
- Location and lens **Profiles**

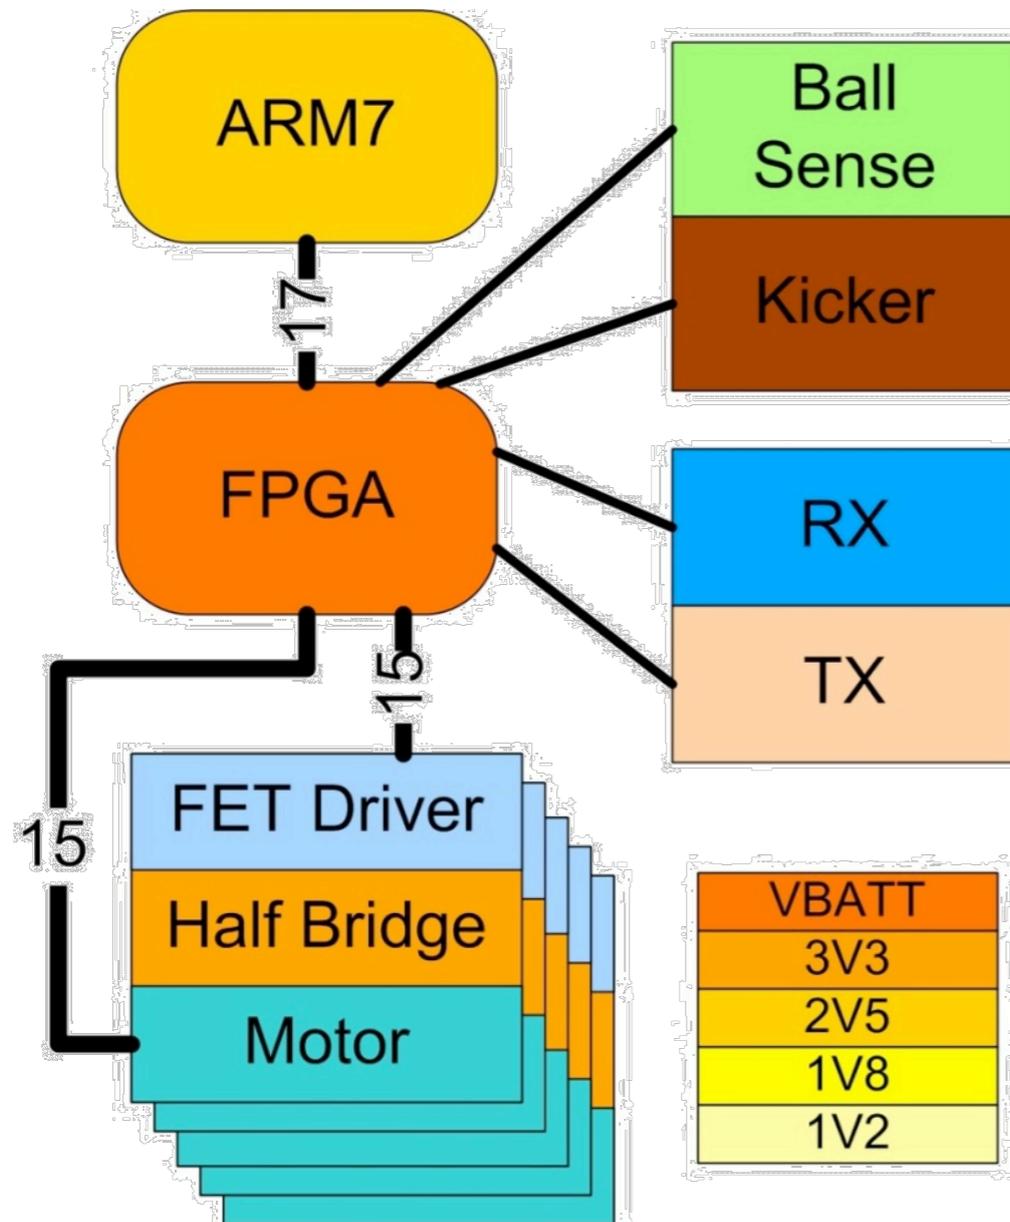

Gameplay

- **Simulator** allows development without robots
- **Hierarchical** gameplay architecture
- **Scriptable** plays
- **Probabilistic** game state estimator

Controller

- **Translates** instructions from the server to physical movements
- **“Dumb”** though some local feedback control

Controller

- Server updates at **100 hz**
- **Two** layer
- **325+** surface mount parts
- **Five** power rails

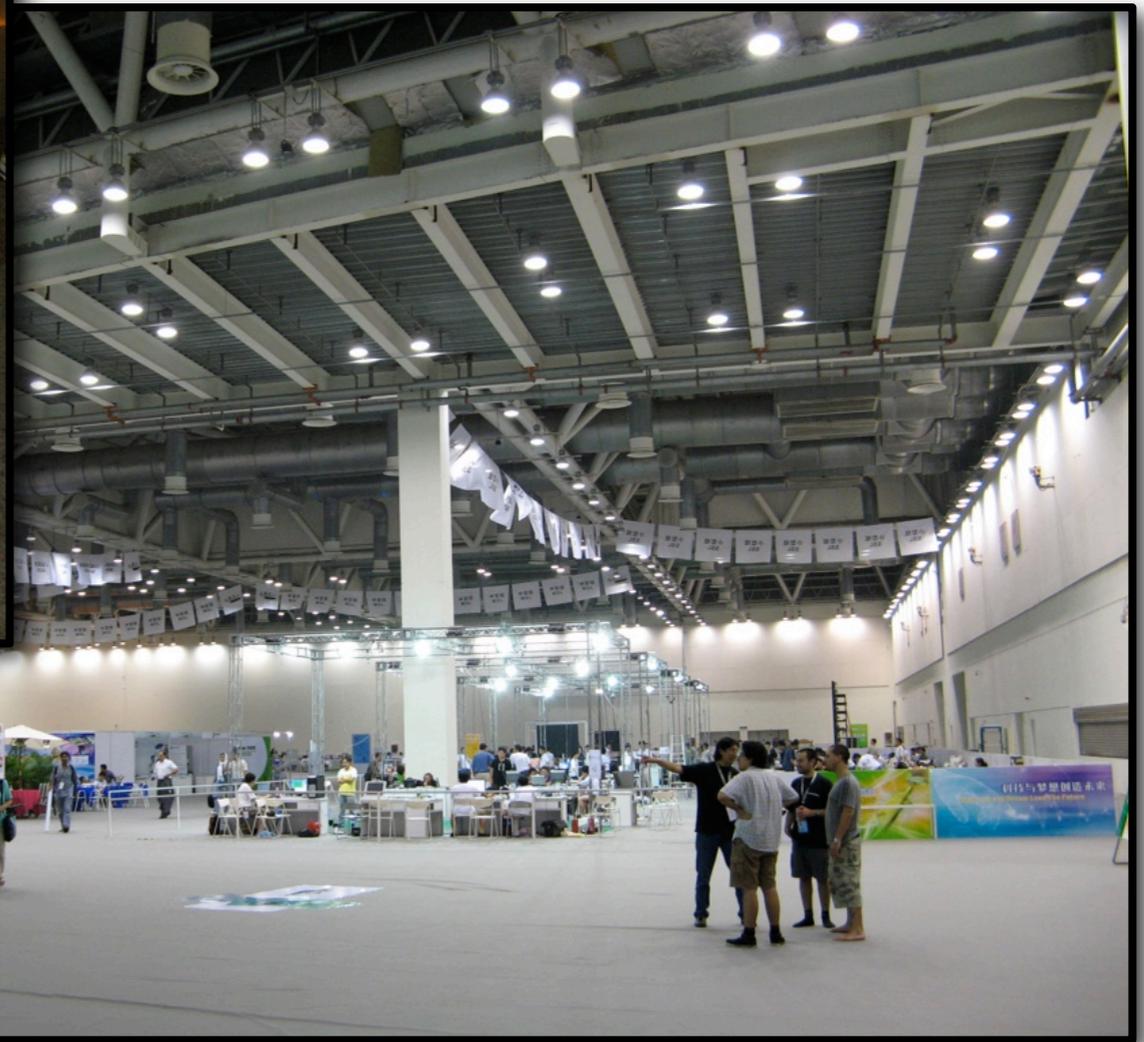

Scale

- Over **750 parts** per robot
- **3000+** nets per board
- **325+** surface mount parts
- **\$1500** per robot
- **Thousands of hours** of development and fabrication time ... remaining!
